

Radial Trawl

Designed to achieve a very large herding area with a towing resistance lower than that of conventional midwater trawls.

Features:

- Graduated mesh size in the front end allows for the greatest herding area per horsepower to be achieved.
- Extremely effective in shallow and mid-range depths.
- Constructed using high-grade nylon and polyethylene netting which allows for greater durability and strength.
- Very flexible fishing dimensions.
- Aft ends made out of UC Silver knotless or high tenacity knotted polyethylene netting to reduce net drag.
